Aims and goals

The aim of the MDAI conference series is to provide a forum for researchers to discuss models for decision and information fusion (aggregation operators) and their applications to AI.

In MDAI 2016, we encourage the submission of papers on decision making, information fusion, social networks, data mining, and related topics.

Applications to data science and privacy technologies, as well as to real world problems are welcomed.

Topics of interest include, but are not limited to:

A) **Methods and Tools**:

- Information fusion
- Aggregation operators
- Utility and decision theory
- Model and operator selection
- Learning methods for parameter determination
- Machine learning and statistical learning
- Soft computing
- Optimization methods in AI and decision modeling
- Non-additive measures and integrals

B) **Applications**:

- Data science
- Information privacy and security
- Social networks
- Data mining
- Bibliometry
- Autonomous robots
- Entertainment computing
- Evaluation methods
- Bioinformatics
- Information access
